CONTENTS

UCS@SCHOOL-UPDATE

This document contains the changelogs with the detailed change information for the update of UCS@school from version 5.0 v6 to 5.0 v7.

If necessary, important notes about the update are covered in a separate section. The change information for previous version jumps can be found at https://docs.software-univention.de/.

1.1 General notes on the update

During the update, services within the domain may fail. For this reason, the update should be performed within a maintenance window. It is generally recommended to install and test the update in a test environment first. The test environment should be identical to the production environment.

1.2 Update process

Major updates for UCS@school are released in the Univention App Center as a standalone app update. Minor updates and bug fixes (errata for UCS@school) that do not require interaction with the administrator are released in the repository of the already released app version of UCS@school. The changelog documents that Univention issues with each UCS@school app version are then expanded accordingly with a new section that shows which packages were released at what time and which errors were fixed in the process.

CHANGELOG

2.1 Released on 2025-03-10

Source package *ucs-school-metapackage* in version `13.0.19`:

- Updated: In preparation for the UCS@school 5.2 update, two join hooks are now installed in the system. The first uses Python 2.7 and is registered for UCS 4.4 systems only. The second uses Python 3 and is registered in the LDAP for UCS 5.0 and newer (Bug #57897[1]).

Source package *ucs-school-import-lusd* in version `1.0.5`:

- Fixed: The default value for the LUSD `issuer`, used for authentication, has been changed for production use (Bug #57974[2]).
