CHAPTER

ONE

UCS@SCHOOL-UPDATE

This document contains the changelogs with the detailed change information for the update of UCS@school from version 5.2v1 to 5.2v2.

The change information for previous version jumps can be found at the changelog overview page[1].

1.1 General notes on the update

During the update, services within the domain may fail. For this reason, the update should be performed within a maintenance window. It is generally recommended to install and test the update in a test environment first. The test environment should be identical to the production environment.

1.2 Update process

Major updates for UCS@school are released in the Univention App Center as a standalone app update. Minor updates and bug fixes (errata for UCS@school) that do not require interaction with the administrator are released in the repository of the already released app version of UCS@school. The changelog documents that Univention issues with each UCS@school app version are then expanded accordingly with a new section that shows which packages were released at what time and which errors were fixed in the process.

CHAPTER

TWO

CHANGELOG

2.1 Released on 2025-04-17

Source package *univention-management-console-module-selective-udm* in version `10.0.0`:

- Technical: This package was updated to conform with new versioning guidelines (Bug #58213[2]).

Source package *ucs-school-umc-computerroom* in version `14.0.2`:

- Feature: When observing multiple student computers, the full width of the browser window is now used to display the screenshots (Bug #58165[3]).
- Fix: The zoomed in image on the "Watch" overview is now updated like the thumbnails. The styling has been adapted to always show the enlarged image in the center of the screen. The zoomed in image will now be shown after clicking on the thumbnail and not after a hovering on it (Bug #58160[4]).
- *Please note*: For the two changes mentioned above, adjustments were made to JavaScript and CSS files. Due to the caching of these files by the browser, the changes may not be visible immediately. It is therefore advisable to invalidate the browser cache. Otherwise it will take at least 1 hour before the web browsers request the new version of the files from the server.
